

RELANSIN -CEEX 016 (2005-2008)

**CALIXARENES BASED COMPOSITE MATERIALS WITH MAGNETIC AND/OR SELECTIVE
COMPLEXATION PROPERTIES FOR SOME METALLIC IONS OF TECHNOLOGICAL
INTEREST-CALIXCOM**

Project manager: dr. Elisabeth-Jeanne Popovici

CONSORTIUM

Coordinator :

CO-P1- Institute for Research in Chemistry, Cluj-Napoca, ICCRR

Partners:

P2- Politehnica Universitaty Bucharest, Faculty of Chemical Engeeniring –Bucharest, UPB
(prof. dr. Doru Nechifor)

P3-Babes Bolyai University Cluj-Napoca, Faculty of Chemistry and Chemical Engineering, Cluj-Napoca, UBB
(prof.dr. Ioan Silaghi-Dumitrescu, m.c. Al Academiei Romane);

P4- National Institute of R&D for Isotopical and Molecular Technologies, Cluj-Napoca, INCDTIM
(dr. Nicolae Palibroda);

P5- INCDO-INOE2000, branch Institute for Research in Analytical Instrumentation, Cluj-Napoca ICIA
(Bella Abraham);

P6- University of Medicine and Pharmacy “Iuliu Hatieganu” –UMF, Faculty of Pharmacy, Cluj –Napoca, UMF
(conf.dr. Radu Opreanu)

Programmed results

■ Consortium structure

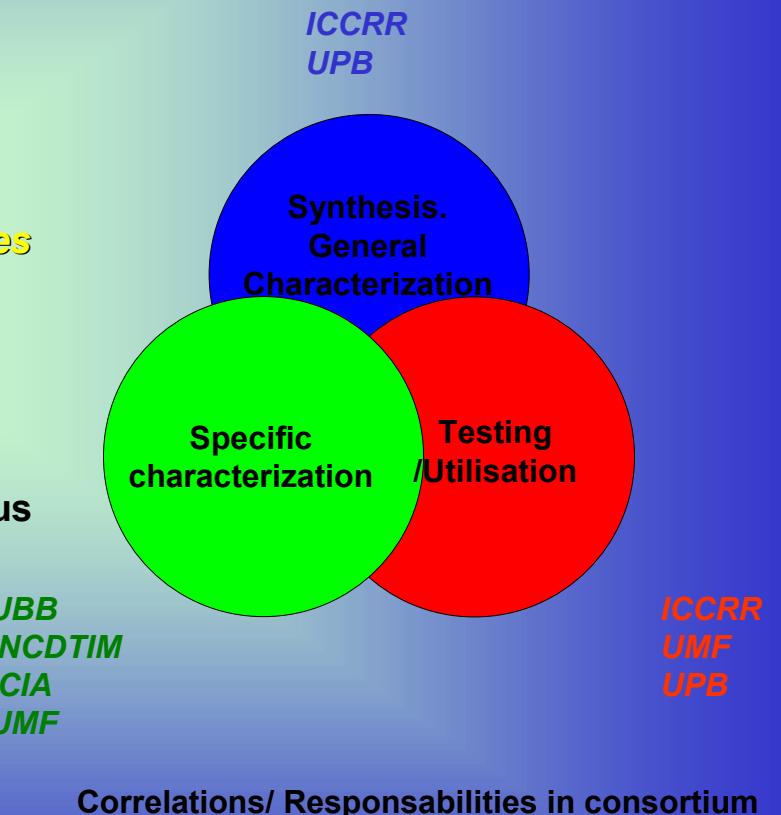

- ICCRR-Cluj (dr. E.J.Popovici)
- UPB-Bucuresti (prof.dr. D.Nechifor);
- UBB-Cluj (prof.dr. Ioan Silaghi-Dumitrescu)
- INCDTIM-Cluj (dr. N. Palibroda)
- ICIA-Cluj (chim.Bella Abraham);
- UMF-Cluj (conf.dr. R. Opreanu)

■ Technical-scientific results \Rightarrow technologies; products; procedures

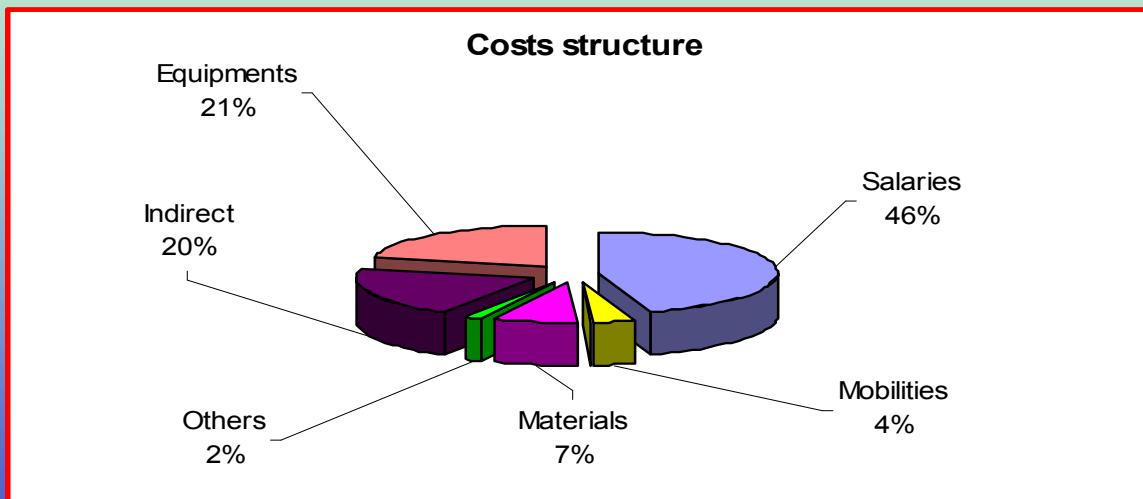

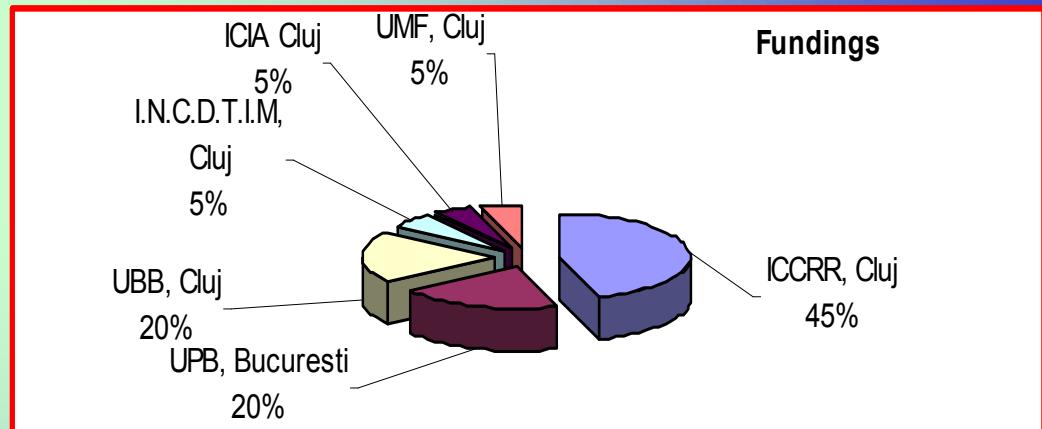

- Micro-composite material CALIXCOM-A
- Nano-composite material CALIXCOM- H ;
- Separation/Extraction of rare earth (RE) / precious metal (PM) ions with CALIXCOM-A
- Separation/Extraction of metallic ions with CALIXCOM-H
- Extraction of metallic ions of technological interest from aqueous medium

■ Results dissemination

- Published works (papers);
- Works presented to scientific manifestations
- Organisation of one thematic Workshop
- Patent(s)

Fundings/ Costs structure

General objective of the project

Preparation of some new calixarene-based micro- and nanostructured materials with magnetic properties and/or selective complexation ability of some ions of technical interest

- ⇒ *microcomposite material CALIXCOM-A = composite powder based on adsorbent-calixarene system*
- ⇒ *hybrid nanocomposite material CALIXCOM-H = suspension of nanoparticles functionalised with calixarene, with magnetical properties*

Project plan

1st Stage (2005). Scientific-technical fundamentation of the project. Preliminary studies ⇔ Partners: ICRRC, UPB, UBB, INCDTIM, UMF

2nd Stage (2006). Researches referring to the synthesis of some new products based on chemically modified calixarenes ⇔ Partners: ICRRC, UPB, UBB, INCDTIM, ICIA, UMF

3rd Stage (2006). Studies referring to the evaluation of the capability of chemically modified calixarenes to coordinate metallic ions of technical interest ⇔ Partners: ICRRC, UPB, UBB, INCDTIM, ICIA

4th Stage (2007). Researches regarding the preparation and characterisation of hybrid and adsorption composite materials based on calixarenes ⇔ Partners: ICRRC, UPB, UBB, INCDTIM, UMF

5th Stage (2008). Studies referring to the utilisation of the CALIXCOM-type materials for the separation/ isolation from aqueous medium of metals of technical interest ⇔ Partners: ICRRC, UPB, UBB, INCDTIM, ICIA, UMF

Project progress

Performed researches

- Studies referring to the synthesis and characterisation of some new compounds based on para-tert-butyl-calix[4]arene and para-tert-butyl-calix[6]arene, obtained by grafting of some functional groups with increased co-ordination potential, products that are to be used for the preparation of the adsorption-based microcomposite material CALIXCOM-A ([Annex 1](#))
- Studies referring to the preparation of nanoparticles as well as to the synthesis and characterisation of some chemically modified calix[4]arene, the components of the hybrid nanocomposite material CALIXCOM-H

Up-to-now results

- Consolidation of the material basis of partners :
 - a) *R&D Equipments* : **Thermal Analyser*: TG-DTG-SDTA system and DSC colorimeter (Metller-Toledo); Colloidal mill with accessories; Automatique applier for plan separations;
 - b) *Laboratory instruments/ devices*;
 - c) *PC equipments, soft-wares*
- Basic researches in the field of calixarenes. Results disseminations. ([Annex 2](#));
- Preparation of some product sets, component parts of *Calixcom A* and *Calixcom H*, that are to be tested as complexation agents.

New para t-butyl-calix[6]arene for rare earth ions extraction

N. Popovici, E.-J. Popovici, A. Saponar, I. Silaghi-Dumitrescu, D. Nechifor, R. Oprean & N. Palibroda

Introduction

■ Paper goal

➤ Synthesis of some new chemically modified calixarene with increased capability to coordinate RE³⁺; Derivatization was performed at the "narrow rim", with crotyl groups CH₃-HC=CH-CH₂- (π electrons) and amido [-CH₂-CO-NR₂] and ester - [CH₂ COO-R] or both (p electrons)

■ General presentation of calixarenes

➤ Polynuclear compounds obtained through condensation of alkyl – phenols with formaldehyde;
➤ Compounds with host-guest properties, their characteristic feature being a shape cavity whose dimension can be modified with the use of grafted groups;
➤ Compounds with specific structure that allows them to function as supramolecular receptors of cations, anions or neutral molecules.

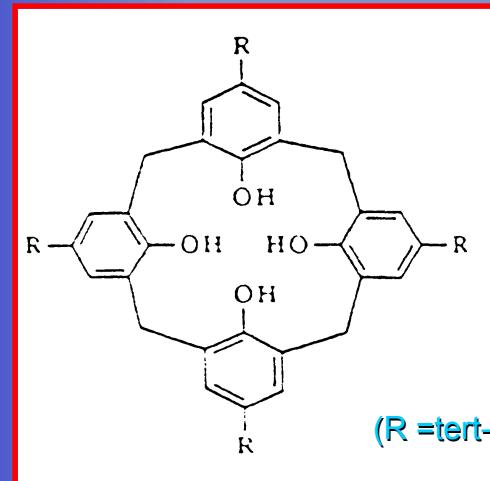

■ General requests for the use of calixarenes as receptors/extracting agents from metals from aqueous medium

➤ To contain polar groups capable to replace the hydration shell (sphere) of ions that are to be complexed
➤ To present the coordination possibility through donor grafted groups;
➤ To show a large solubility in non-polar solvents and to be insoluble in water ;
➤ The calixarene cavity has to have an optimal dimension to trap the target ions;
➤ To form a complex that has to remain in the membrane phase;
➤ Complex formation has to be rapid and irreversible.

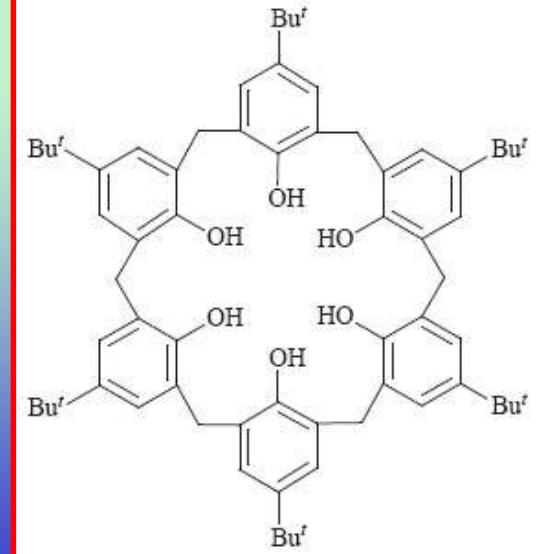

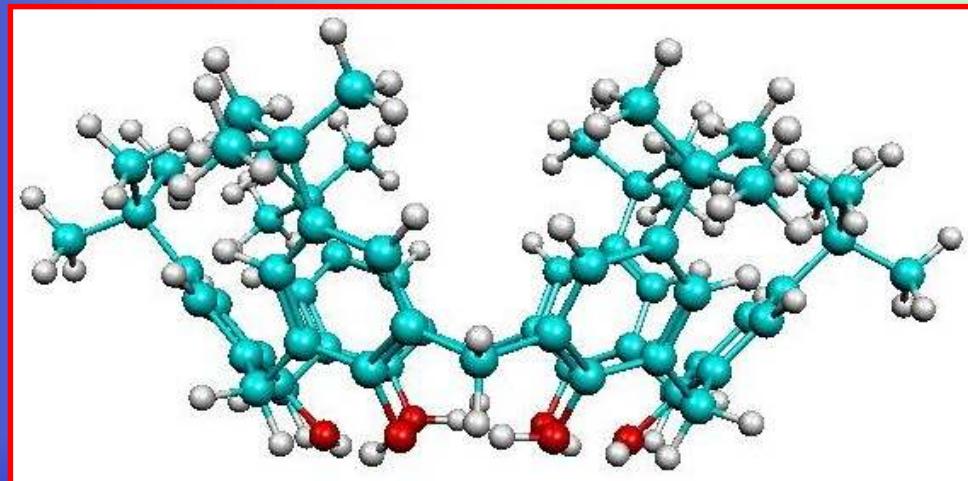

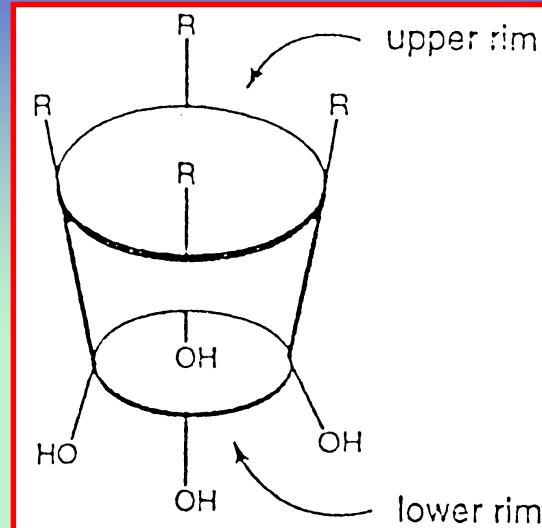

■ Synthesis pathway

para-tert-butyl phenol ⇒ para-tert-butyl calix[4,6]arene ⇒ para-tert-butyl-calix[4,6]arene derivative

Schematic representation of the compounds p-tert-butyl calix[4]arene and p-tert-butyl calix [6]arene

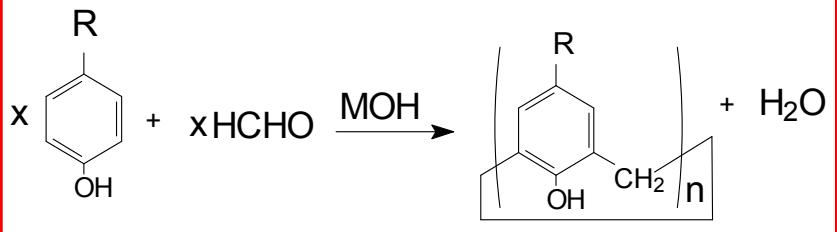

(R =tert-butyl): t-C₄H₉)

Experimental part

Preparative stages

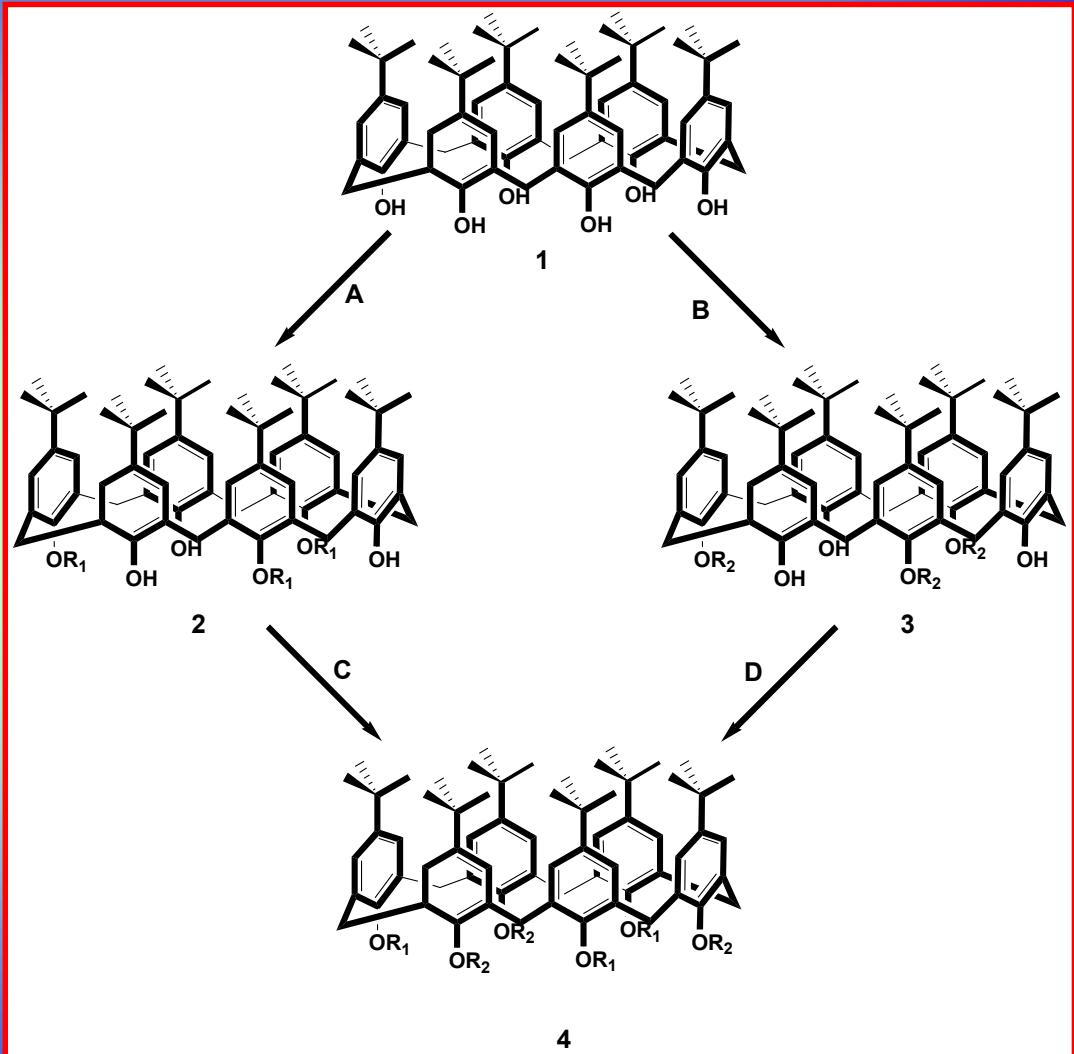

a) Preparation of the parent calix[6]arene

where
 $x = 4, 6, 8; n = 4, 6, 8; M = \text{Na, K, Rb, Cs.}$

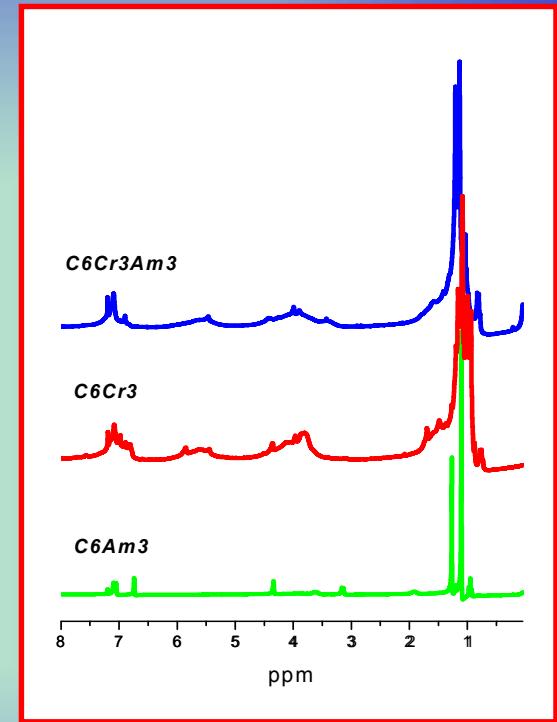

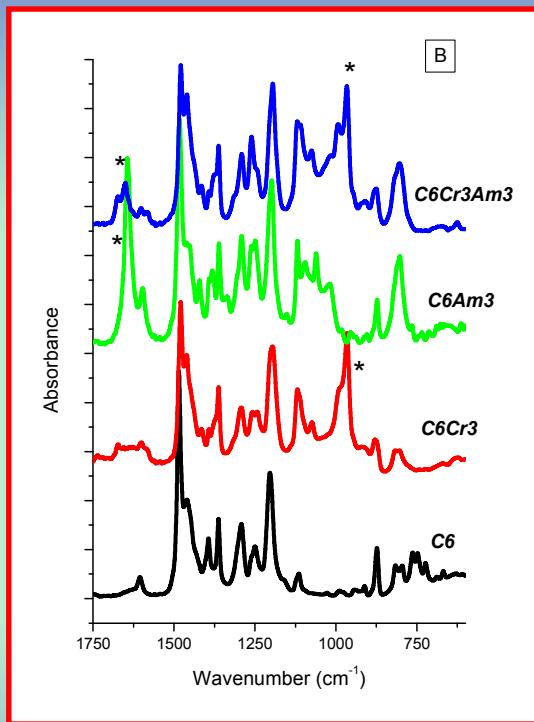

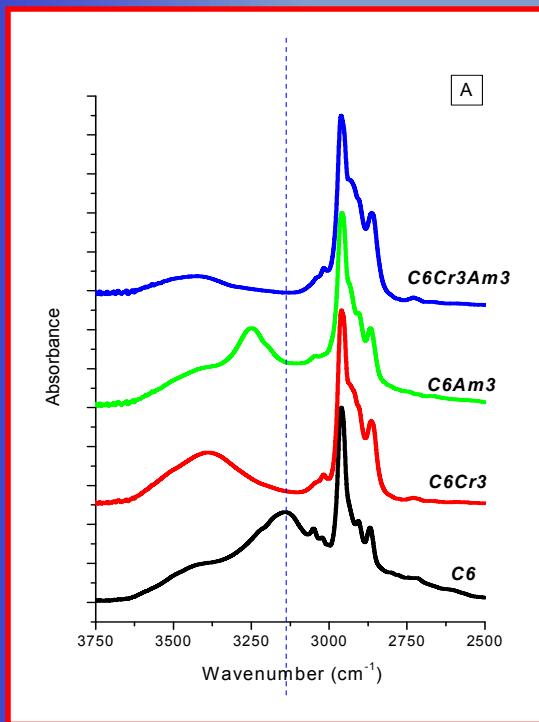

b) Synthesis of the functionalised calixarene

Compound 2 \Leftrightarrow C6Cr3, p-tert-butyl-tricrotyl-trihidroxi calix[6]arene
 Compound 3 \Leftrightarrow C6Am3, p-tert-butyl -triamido-trihidroxi calix[6]arene
 Compound 4 \Leftrightarrow C6Cr3Am3, p-tert-butyl -tricrotyl-triamido calix[6]arene

Results

Characterisation by FTIR spectroscopy and ^1H -RMN spectroscopy

Conclusions

- The chosen pathway enabled the preparation of C6Cr3, C6Am3, C6Cr3Am3 derivatives;
- The synthesis yield of the calixarene derivative with mixed groups C6Cr3Am3 is relatively low;
- Researches are in progress for: * Optimization of the synthesis procedure of the calix[6]arene with mixed substituting groups; * Testing the derivatives capability to extract/complexate RE and PM ions.
